P O N D
A N
ALMANACK
for the year of our
L O R D G O D
1677.

Being the first after Bissextile or Leap
year and from the worlds Creation at the
Spring 5680 years Compleat.

Amplified with many good things both
for pleasure and profit and fitted for the
Meridian of *Sassow-Walden* in *Estro*
where the Pole is elevated 53 degrees and
6 minutes above the Horizon.

And may serve indifferently for any other
place of this Kingdom.

C A M B R I D G E,

Printed by *John Hayes*, Printer to the
Univerfity, 1677.

Common Notes and Moveable Feasts for this year, 1677.

The Golden Number is	6
The Cycle of the Sun	6
The Epact	6
The Dominical Letter	C
Shrove-sunday	Feb. 25
Easter day	April 15
Rogation-sunday	May 20
Ascension-day	May 24
Whitsunday	June 3
Trinity-sunday	June 10
Advent-sunday	Decemb. 2

The Suns entrance into the Cardinal Signs.

THe Sun enters Aries March 9 day, 26 minutes past 9 at night, at which time the figure of the Heavens will appear in this manner, viz. 6 Degrees of Scorpio Ascending in the East, 19 Degrees of Leo upon the mid-heaven, 6 Degrees of Taurus in the West, and 19 Degrees of Aquarius upon the Cusp of the fourth House. Mars is Lord of the Ascendant, and is placed in the 9 House, called the house of Religion; which may shew, that war may be raised in some places this year upon the account of Religion as formerly. Saturn in the 7 House may signifie that those which are born near this Revolution, shall live long before they marry, and some of them not at all.

He enters Cancer June 11 day at 2 in the morning.

He enters Libra Septemb. 12 at 4 afternoon.

He enters Capricorn Decemb. 11 at 4 in the morning

The

The beginning and ending of Terms this year.

Hilary Term begins January 23, ends February 12.

Easter Term begins May 2, ends May 28.

Trinity Term begins June 15, ends July 4.

Michaelmas Term begins October 23, ends Novem 28.

Note that the Exchequer openeth 8 days before any Term begins, except the Term of Trinity, in which it openeth but 4 days before.

Times prohibiting Marriage.

Marriage comes in on the 13 day of January, and at Septuagesima Sunday it is out again untill Low-sunday; at which time it comes in again, and goes not out till Rogation-sunday: thence it is forbidden untill Trinity-sund. from whence it is unforbidden till Advent-sunday: but then it goes out, and comes not in again till the 13 day of January next following.

Of some weights and measures used in England.

There are two sorts of weights used in Eng. viz. Troy, and Avoirdupois, in Troy weight 24 grains of wheat make a peny weight, 20 peny weight an ounce, 12 ounces a pound; by this weight are weighed Pearls, Gold, Silver, Bread, and all manner of Corn, and Grain.

The pound Avoirdup. contains 16 ounces; but the ounce Avoirdup. is lighter then the ounce Troy by almost one part. By this weight is weighed all Grocery ware, Fleth, Butter, Cheese, Iron, Hemp, Tallow, Wax, Lead, and all things whereof comes Waste.

The greatest measure used for Liquid things is a Tun, which makes 2 Butts, 4 Hogsheads 8 Barrels, 14 Rundlets, 152 Gallons, 504 Pottles, 1008 Quarts, or 2016 Pints.

The greatest measure for Grain is a Last, which contains 10 Quarters, 20 Coombs, 40 Strikes, 80 Bushels, 320 Pecks, 640 Gallons, 3560 Quarts, or 5120 Pints.

January hath xxxi days.

Full moon 8 day, 17 min. past 11 at night.
 Last quarter 16 day, 40 min. past 2 afternoon.
 New moon 23 day, 31 min. past 5 morning.
 First quarter 30 day, 2 min. past 3 afternoon.

1 (as the Poets say) was the son of Cœlum and Thetis,
 2 who married his own sister Ops, and had by her divers
 3 child but he devoured all the males (except 14 who was
 4 secretly preserved by Ops) that after his death the king-
 5 dom might return to his eld. Br. Titan. but 14 coming to
 6 mans estate (because 14 would have killed him) thrust his
 7 Father out of his kingdom, who went into Italy thereup-
 8 on; in his time was the golden age

January 1677.

3 Seasonable
 4 weather the
 5 former part.

11 Tempestuous,
 12 windy wea-
 13 ther, with
 14 snow, or rain,
 15 yet not very
 16 cold.

23 Windy, with
 24 cloudy moist
 25 weather, if
 26 not snow a-
 27 bout this
 28 time.

29 Very cold.

I have formerly given an account
 of the Poets fictions upon most of the
 Constellations visible in our Hori-
 zon: this year you have some obser-
 vations upon Saturn; first Poetical;
 secondly as he was a heathen God;
 thirdly Historical, as he was a Kings
 and fourthly Astronomical, as he is
 one of the seven Planets.

On the 10 day we find *Paul* the
 Hermit, who being in danger to be
 betrayed to death for the Christian
 faith by his brother; at 15 years old,
 forsook the Conversation of man-
 kind: and afterwards (as is record-
 ed of him in story) lived 98 years
 in a Cave, and on January 10, An.
 343, left this mortal life for a
 better.

February hath xxviii days.

Full moon 7 day, 18 min. past 4 afternoon.

Last quarter 14 day, 12 min. past 11 at night.

New moon 21 day, 28 min. past 5 afternoon.

h was painted like an old man barheaded, in a ragged garment, holding in his hand a hook, a key, and a Serpent biting of his own tail, devouring his own children: by his bare head they meant that time reveals all things, his ragged garment shewed that time wears & consumes all things, by the sickle & key, that time opens, & cuts down all things, the Serp. bitin. of his own tail expresses the nature of the y. return. into it self like a ring.

February 1677.

Cold at the beginning, but soon grows warmer with seasonable weather.

About this time expect high winds with rain, or snow, pleasant soon after.

Cold, if not frost and snow near the end.

On the 6 day we find *Dorothy*, she was a *Picus virgin* born in *Caesaria*, a city in *Cappadocia*, she was very zealous in the faith of Christ; and is reported to have an Angel constantly to attend her, she was cruelly tortured, and afterwards, viz. on Feb. 6 Anno 304 beheaded, it is of this virgin Lady that the Tragedy called the virgin Martyr is made.

Saturn being the son of Coelum, or Heaven, and marrying of his own sister Ops, that is the earth, begot of her many children, which may shew, that by the influence of Heavens, working upon the earth, all things are ingendered; the Heaven being as it were the Father affording influence; and the earth the Mother furnishing matter fit for the generation of them.

1 Cold, and
2 windy, if not
3 wet at the
4 beginning.

Saturns picture may have reference to the golden age of this world, in which men lived till they were very aged, which was expressed by Saturns gray hairs, and worn garment; which garment also shews that men were not given to pride, and curiosity of apparel in those days; his bare head shewed the honesty and truth which then was, and indeed is naked; whereas lying, falshood, and deceit are covered.

April 1677

Cool at the beginning.

A probability of good weather for the former part of this moneth.

On the 17 day we find *Anicetus*, he was Pope, and Martyr, and successour to *Pius* the first, he having governed the Church 11 years, and 4 moneths, was for his non-conformity to the Heathens put to death, on April 17, *Ann. Christi 173. Marcus Aurelius Antoninus* being Emperour.

About this time expect tempestuous, windy, and stormy weather if not thunder.

May hath xxxi days.

Full moon 7 day, 26 min. past 3 morning.

Last quarter 13 day, 21 min. past 5 afternoon.

New moon 21 day, 35 min. past 10 before noon.

First quarter 29 day, 10 min. past 1 afternoon.

h after his coming into *Italy* taught the *Italians* the use of Husbandry; the Hook or Sickle in his hand, may signify the instrument with which we reap down our corn; his gray hairs, bare head, and ragged garments, sheweth the husbandmen live long, have hardy bodies, and are not so nice in their apparel as others: he is called *h d Sasurando*, he being the first that taught men the use of corn wh ch did fill and satisfie them.

May 1677.

This moneth
may begin
well but about
this time expect
winds,
storms, and
thunder in
some places.
Cool, and
moist soon
after.

Better, but
holds not
long.

Cool, and
wet about
this time.

Very warm
the latter
part.

On the 7 day we find *John* of *Beverly*, he was Archbishop of *Tork*, a man both learned, and godly, who being weary of this world, gave over his Bishoprick, and went to the Monastery of *Beverly* in *Yorkshire*, where he ended his life in contemplation, about the year of our Lord 721.

June hath xxx days.

Full moon 5 day, 46 min. past 10 before noon.

Last quarter 12 day, 12 min. past 2 morning.

New moon 20 day, 1 min. past 1 morning.

First quarter 28 day, 19 min. past 1 morning.

Sun-rising.

Sun-setting.

15 (which is nothing but time) is said to have de-
 voured all his children except Jupiter, Juno, Neptune,
 and Pluto, which may signifie that all compnd Bodies
 are destroyed by time : but the four Elements, to wit,
 Fire, Air, Earth, and Water, because of their simple
 nature, are not subject to corruption, or to the Laws,
 and tyranny of Time.

♄ is sometimes painted with six wings, yet slow paced, having his feet of wooll, which sheweth that time seemeth to pass away slowly, and silently, whereas indeed it flies very swiftly: or else this may express the slow motion of the Planet ♄, who is 30 years in passing through the Zodiack by his own motion; but moves swiftly by the motion of the Primum mobile, that is, goes round the earth in 24 hours.

July 1677.

Very warm
with some
storms, and
thunder in
some places.

Good weather
the greater
part of this
moneth, and
not much alteration
except about the
new moon,

Warm if not
thunder near
the end.

The 11 day we find *Pius*, he was Pope and Martyr, and suffered this day for the truth *An. Christi 167* in his Popes Reign there arose a debate concerning the keeping of Easter, whether they should do it on the Jews Sabbath, or on the Sunday; his good Prelate thought fit to issue out his decree for the observing of Easter on Sunday in honour of our Lords Resurrection and ever since it hath been so observed.

August hath xxxi days.

Full moon 1 day, 19 min. past 9 at night.
 Last quarter 10 day, 13 min. past 4 morning.
 New moon 18 day, 5 min. past 7 morning.
 First quarter 25 day, 13 min. past 4 afternoon.

Saturn's genitals were cut off, by his son *M*. and cast into the Sea; of which, and the sea froth *Q* was begotten: by which may be meant, that old age, like unto *h*, is made unfit for generation, because *M*, that is wanton, and intemperate youth hath weakened the Body: or else that the coldness of *h* is tempered by the heat of *M*, for there can be no procreation where cold is not tempered with heat.

August 1677.

Very hot, if
not thunder.

Cooler, with
storms, and
high winds
following.

I fear windy,
and stormy
weather again
about
this time.

Good weather
toward
the end.

The 7 day is placed *Donatus*, he was the first Bishop of Dublin in Ireland, and began the foundation of Christ Church there in the year 1012, which was afterwards finished by Lawrence (Archbishop of that place) with others; toward which building *Sitric* King of Dublin gave much Gold and Silver.

September hath xxx days.

Full moon 1 day, 26 min. past 10 before noon.
 Last quarter 8 day, 44 min. past 9 at night.
 New moon 16 day, 19 min. past 9 at night.
 First quarter 23 day, 58 min. past 11 at night.
 Full moon 30 day, 45 min. past 8 at night.

Sun-riſing.

Sun-ſetting.

h was worshipped as a God among the Saxons, by the name of h; but among the Italians by the name of *Stercutius* because he taught them to dung their ground: wax Tapers or Candles, were wont to be burned upon his altars, to shew, that he brought the light of knowledge, & civility into *Italy*, who before lived in the darkness of ignorance, and rudeness: from hence the Papists borrowed their custom, of burning Candles on their Altars.

September 1677.

H (by a portion given him by *Merk* the wife of *N*) is said to have vomited up all his children which he had devoured; the meaning whereof is, that Time is both the devourer, and restorer of all things, except of *G*, that is, of God, who is not subject to time; or shadow of changing, but is the same from everlasting, and world without end, as saith the Psalmist, *Psal. 90.*

Seasonable
at the begin-
ing.

Windy, with
snow or rain.

Better wea-
ther about
this time.

Not very cold,
but windy.

It grows cold-
er, with high
winds, and
snow, or cold
rain.

Some plea-
sant days
toward the
end.

October 1677.

The 17 day we find *Gregory* the
was wife to *Egfrid* one of the Kings
of Northumberland, who being fully
resolved to serve Christ, built a Mo-
nastery for Nuns, & called it at
Ely, and was her self the first Abbess
thereof, it was afterward destroyed
by the Danes, and rebuilt again by
Ethelwold Bishop of *Winchester*, and
endowed with lands and many pri-
vileges by King *Edgar*.

November hath xxx days.

1st quarter 7 day, 24 min. past noon.

New moon 14 day, 4 min. past 11 at night.

Full quarter 21 day, 13 min. past 2 afternoon.

Full moon 29 day, 47 min. past 1 morning.

The use of this Table in Example.

King Henry 8 began his reign in the year of Christ 1509. April 23.
He reigned 37 years 10 months and 2 days. It is since he began
his reign 168 years compleat the 22 of April this year 1677.
Now to know the time since the end of his Reign, before his name
standing on the right hand, you shall there find 131 years since he
died, January 28. And so of the rest,

POND

P O N D

M. DC. LXXVII.

The latter part of this
ALMANACK
for the year of our
LORD GOD
1677.

Being the first after Bissextile or
Leap-year, and from the Conquest
of *England* by *William* Duke
of *Normandy* 611 years.

Wherein is contained the Eclipses, with seve-
rall usefull Rules and Tables, and the Fairs in

The

. *Ann 1677.*

The foregoing Tables explained.

THe former Tables perfectly shew the Break of Day, Sun-rising, length of the day, length of the night, setting of the Sun, with continuance of twilight, for the whole year, for the latitude of 52 Degrees, 40 minutes, the use is thus.

In the first, or last Columns, find the moneth, and in the next to them the day, in the which you would know any thing contained in the Tables, if you cannot find the day take the nearest unto it, and right against the same you have the hour and minute of all, under their proper Titles, only take notice, that the first part of the Table serves for the summer half year, namely from the 10 of March to the 13 of September, and the last part from the 13 of September to the 10 of March: but to make it plain I shall add one example.

The 6 of April I desire to know the time of the day-breaking, sun-rising, and the rest. I find April in the first Column, and in the second the 6 day, and right against the same, under the Column of day-breaking, 3, 4, which sheweth the day breaketh at 3 of the Clock and 42 minutes. In the next 5, 4, which sheweth the sun riseth, 4 minutes past 5. In the third is 13 hours 52 minutes the length of the day. In the fourth 10 hours 8 minutes, the length of the night. In the next 6 hours, 36 minutes the time of sun-setting. And lastly 9 hours 18 minutes the time when twilight ends: And thus you may proceed at any other time. Only take notice that if you be removed far from the Latitude for which these Tables were Calculated, either north, or south, you will find some errors in them.

Pand 1677.

Of the Eclipses this year.

There will be four Eclipses this year, viz. two of the Sun, and two of the Moon, the first will be of the Moon on the 7 day of May, the middle of it (with us at *Walden*) 24 min. past 3 in the morning; the Digits Eclipsed will be 8 and somewhat more, the beginning, and middle of it may be seen with us, but the Sun riseth before it is fully ended.

The second will be of the Sun, the 21. of May at 10 in the forenoon but will scarce be seen with us.

The third will be of the Moon, the 30 day of October about 11 beforenoon which will be visible to our Antipodes, but not to us.

The last will be of the Sun, the 14 of November about midnight, and therefore cannot be seen by us; but in *China, Japan, &c.* it will appear a great Eclipse.

Some short Rules for Husbandmen & Gardiners.

Set and transplant young Trees and Quicksets every New moon, from Novem. till Feb. in the same months also Prune and nail up wall fruit, and dig, and dung your ground against the Spring; sow, set, and cut such things as you would have to grow, or bear fruit quickly, in the New Mo. if it may conveniently be done; on the contrary such things as you would have to grow slowly or not at all, cut or pluck them up in the wane of the Moon, at which time also Fell Timber. Sow round seeds, and such seeds as produce round roots about the Full Moon; sow hardy seeds and pot-herbs in Feb. if the weather be mild, but tender seeds not till after the cold winds and frosts are over, gather such fruit and seed as you intend to keep about the Full Moon, in a fair day. Graff at the latter end of Feb. or in March in mild weather.

Pond 1677.

A Table whereby you may find the Golden Number, Epact, Cycle of the Sun, and Dominicall Letter, for 28 years to come, and from thence Easter day.

Year of our Lor.	Gold.N.	Epact	Cycle of Sun	Domin. Letter.	Leap year.	Easter day
1673	2	22	2	H		March 30
1674	3	3	3	D		April 19

1698	8	28	27	B		April 14
1699	9	9	28	A		April 9
1700	10	20	1	G	F	March 31

The former Table is so easie, it needs no explanation, for find but the year of our Lord in the first Column, and right against the same, (under the respective Titles) you may find whatsoever is contained in the Table, wherefore I shall onely give an account from whence those numbers do arise.

The Golden Number is nothing but a periodical Revolution of 19 years; in which time the ancient Astronomers were of opinion that all the Conjunctions and Aspects of the Sun and Moon did return to the same place in the Zodiack which they were at 19 years before, but this is not exactly true, this Circle is called *Decemnovennis Circulus*, also called the Golden Number from its excellent use, and because it was written in the Kalender with letters of Gold.

The Epact (never exceeding 30) ariseth from the excess of the Common Solar-year, above the Common Lunar-year, the one containing 365 days, and the other but 354; from which difference (being 11 days) cometh the Epact, which is added to the Lunar-year to make them equal.

The Cycle of the Sun is a Revolutional number of 28 years, in which space of time there is a perfect change of all the Sunday-Letters; so as this Circle was invented not to shew any changes in the Suns motion, but to find thereby the Sunday-Letter for any year proposed.

The Sunday Letter is always one of these seven, A B C D E F G, it sheweth Sunday, or the day of the Sun all the year, but herein observe that in the Bissextile or Leap-years there are two Sunday-Letters, whereof the

first is to be accounted the Sunday-Letter, from the first of January, to the 24 of February, or Eve of Saint *Marshall*, and the other from thence to the end of the year.

The Feast of Easter, according to the command of God, was celebrated by the children of *Israel*, upon the 14 day of the first moneth *Nisan*, in the Evening, the beginning of which Moneth was from the New Moon next following the Vernal Equinox; but it is not kept by the Christian Church in the 14 Moon, but on the Lords day following the same, and the Bounds or Limits of Easter, (as it is observed by the English Church) are from *March 12*, to *April 25* inclusive; so that it never falls sooner then the 21 of *March*, nor later then the 25 of *April*; the reasons are first, Easter can never be celebrated on the 21 of *March*, because that is the supposed day of the Equinox, so that the Full Moon in the moneth *Nisan* cannot fall before that time; therefore the next Lords day cannot be sooner then *March 22*.

As for the later Bound, viz. *April 25*, it is to be noted, that the Full Moon in *Nisan* cannot happen later, then when the 14 Moon of the Moneth *Adar* falleth on the 20 of *March*, to which if an intire moneth of 29 days be added, the last Full Moon in *Nisan* will fall *April 18*; and because that day may be Sunday, a whole week more is to be added, which may extend to *April 25* inclusive.

Easter and the other moveable Feasts in *England*, are thus found, Shrove-tuesday is always the first Tuesday after the first new Moon after *January*, the Sunday following is *Quadragesima*, and the sixth Sunday after is Easter-day.

London 1677

mas day, and the day after, for three days.

There is newly reprinted at Cambridge, *Lexicon Graeco-
Latinum Schrevelianum*, fully enlarged; wherein not only
the Greek primitive Themes, with some few Derivatives, Com-
pounds and Decompositions, which have only been published in the
former Edition, but also the great body of that vast Language, the
most copious Derivations, Compositions, and Decompositions of
Nouns, Verbs and Particles, (so far as is necessary for promul-
gation, and use in the learned Sciences) or use to further proficiency in
those Studies) is exactly compiled and digested, according to
Scribani, and Gronovii's Schrevelian's Alphabetical method,
throughout the whole work; comprehending in that method the
huge bulk of words, in Constantine's great Dictionary, Stephani's
vast Thesaurus, and Scapula's accurate extract thereof. By William
Robinson A. M.
